Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The application refers to the field of floating semi-submersible oil production and storage.

The closest state of the art is considered to be the document GB 2 216 849 which discloses an arrangement for storing of production oil at a semi-submersible platform. A buffer storage tank is mounted between the two underwater floats and a shaft is provided that communicates the buffer tank with the deck structure of the platform.

However, the amount of oil that can be stored in said buffer tank is limited, which necessitates a dedicated tanker.

This problem is solved by attaching a concrete storage tank below the pontoons of the platform, the concrete tank being subdivided for stability and ease of operation.

The available state of the art neither discloses nor suggests this combination of features and therefore, the application complies with the requirements of novelty and inventive step of Articles 33(2) and 33(3) PCT.
